SUMMARY

Computer Science graduate (B.Tech, 2025) with 7 months of LLM evaluation experience at Innodata, testing model outputs against guidelines and defined test cases. Builds RAG and LLM applications in Python with LangChain, Pinecone, FastAPI and the Groq API, and led a deep-learning research project reaching 98.5% accuracy across 38 plant-disease classes.

EXPERIENCE

Innodata · LLM Evaluation — Remote
Data Annotator (Freelance) — Aug 2026 – Present
Analyst – AI/LLM Practice (Fixed-term contract) — Mar 2026 – Jul 2026

- Evaluate LLM responses and complex system payloads against structured guidelines for logical consistency, reasoning correctness and safety, producing training data for LLM fine-tuning.
- Validate AI application outputs against defined test cases, identify recurring failure patterns, and document findings for the model teams.
- Contributed to text-classification benchmarks and structured prompt-engineering workflows aimed at improving training-data quality and reducing hallucinations.

PROJECTS

Syllabus RAG Assistant · Python, LangChain, Pinecone, Hugging Face, Groq, Streamlit — Nov 2025 · GitHub

- Built a chat assistant that answers B.Tech syllabus questions from the course document instead of the LLM's general knowledge.
- Cleaned and chunked the source PDF into 224 overlapping chunks (1,000 characters, 200 overlap), embedded them with all-mpnet-base-v2 (768-dim) and indexed them in a Pinecone serverless index.
- Wired top-4 retrieval into a LangChain pipeline with Llama 3.1 8B on Groq, a context-only answering prompt, and a Streamlit chat UI with session history.

Project-X: Local-First Desktop AI Client · Python, FastAPI, React, TypeScript — Nov 2025 – Present · GitHub

- Built a desktop AI chat client that calls providers such as Groq and OpenAI with the user's own keys, with no server, accounts or telemetry.
- FastAPI backend with REST endpoints and a decoupled React/TypeScript frontend; API keys stored in the OS keychain, chat history in a local database.
- One-command setup scripts for Windows, macOS and Linux; endpoints tested through Swagger UI and Postman.

aRandomJoke: FastAPI Integration Service · Python, FastAPI, Docker, REST — Feb 2026 · GitHub

- REST service that wraps an external joke API and adds create, list and delete endpoints for saved favourites, with routing, external calls and storage in separate modules.
- Containerised with Docker (python:3.11-slim, Uvicorn) and served to a small HTML/JavaScript frontend.

EnhancedMobileNetV2: Plant Disease Detection CNN (Research) · TensorFlow/Keras — Apr – Aug 2025 · GitHub

- Extended MobileNetV2 with custom Keras layers: squeeze-and-excitation channel attention and ATTRUS, a residual channel-reweighting block, trained with two-phase transfer learning.
- Reached 98.5% accuracy and 0.985 F1 on 17,572 held-out images across 38 crop-disease classes, 2.3 points above plain MobileNetV2 (96.2%).
- Benchmarked against five baselines; came within 0.3 points of ResNet50 (98.8%) at 40% of its saved size (39 MB vs 98 MB), and beat VGG16 (96.8%, 60 MB).

Other: Voice assistant with speech recognition, Llama 3.3 70B on Groq and text-to-speech; FastAPI Habit Tracker REST API; NLP practice with NLTK and spaCy; sign-language recognition CNN.

SKILLS

Languages & APIs: Python, SQL, TypeScript, REST APIs, FastAPI, JSON
GenAI: RAG, LangChain, prompt engineering, LLM evaluation, Hugging Face sentence-transformers, Pinecone, Groq API
Machine learning: TensorFlow/Keras, transfer learning, scikit-learn, NumPy, Pandas
Tools: Git, Docker, Streamlit, Postman, React

EDUCATION & CERTIFICATIONS

University of Kashmir · B.Tech, Computer Science and Engineering — 2021 – 2025 · Srinagar

Certifications: Generative AI Foundations (upGrad × Microsoft) · Artificial Intelligence Fundamentals (IBM) · Getting Started with Data (IBM) · Python (Kaggle)
