SUMMARY

Computer science engineer building practical software that combines AI and software engineering, from deep learning for computer vision to LLM applications, RAG pipelines and FastAPI backends.

SKILLS

Languages: Python, SQL, TypeScript, Java, C
AI / ML: TensorFlow, CNNs, attention, MobileNetV2, computer vision, NLP (NLTK, spaCy)
GenAI: LangChain, RAG, LLM applications
Backend & tools: FastAPI, REST APIs, Git, Jupyter, Godot

PROJECTS

- **EnhancedMobileNetV2** — Plant disease prediction with a MobileNetV2 CNN enhanced by attention, compared against baseline models.
- **Project-X (in progress)** — TypeScript desktop app for interacting with AI.
- **SignLanguageML** — Sign language recognition using CNNs (5th-semester project).
- **RAG-practice** — Retrieval-augmented generation pipeline that answers from a real dataset.
- **FastAPI-Habit-Tracker** — REST API for tracking habits, streaks and focus.
- **NLPTutorial** — NLP practice with NLTK and spaCy: tutorials and assignment solutions.
- **FlappyBirdGodot** — Flappy Bird clone built with the Godot engine.
